AURA Health

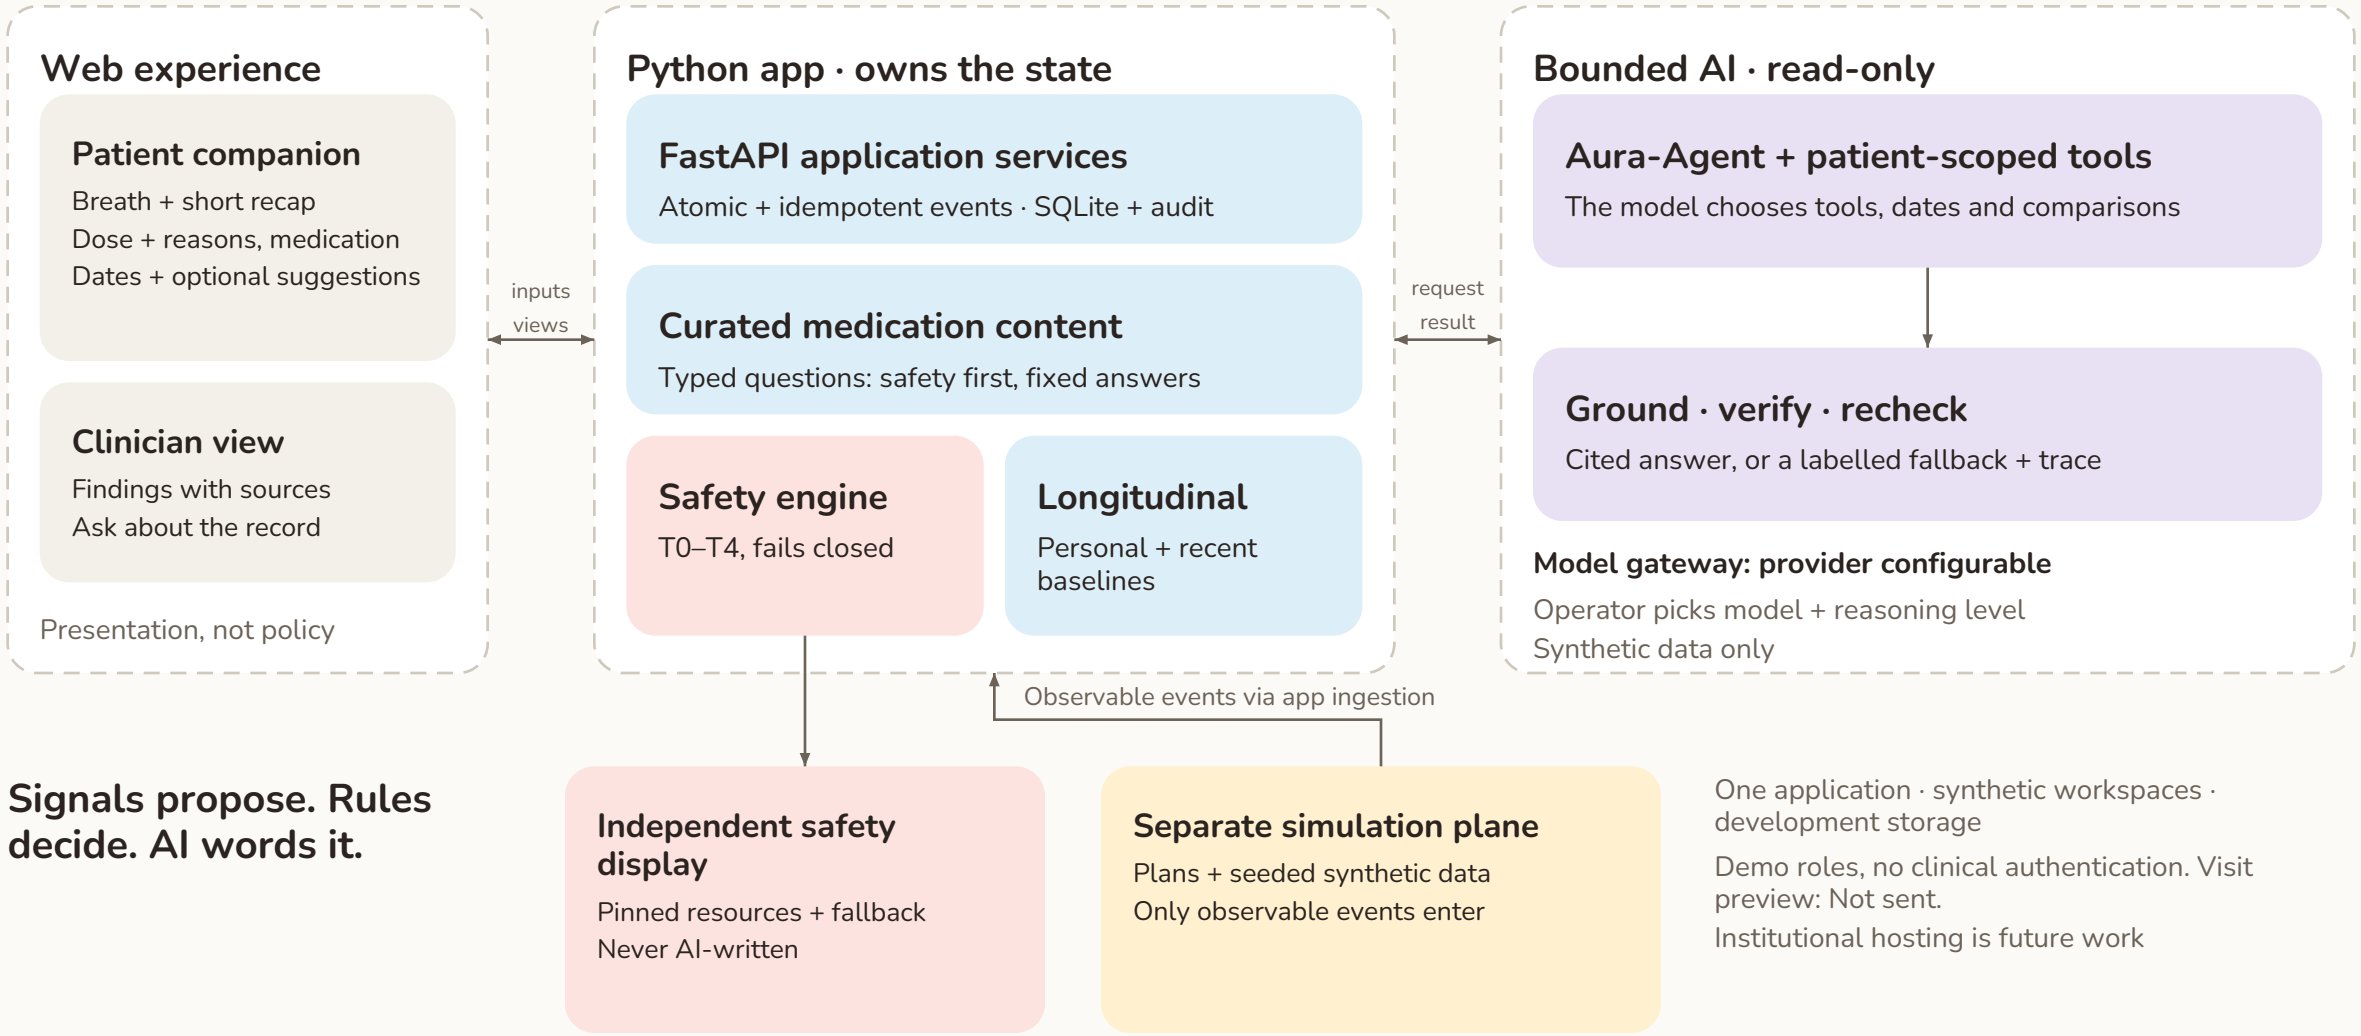

A calm companion between doctor visits

Healthcare track

AI Can Do It – Tencent Cloud Hackathon
Singapore 2026

AURA Health · system architecture

Challenge 2 · Scenario 1: mental health maintenance for working adults on antidepressants

Signals propose. Rules decide. AI words it.

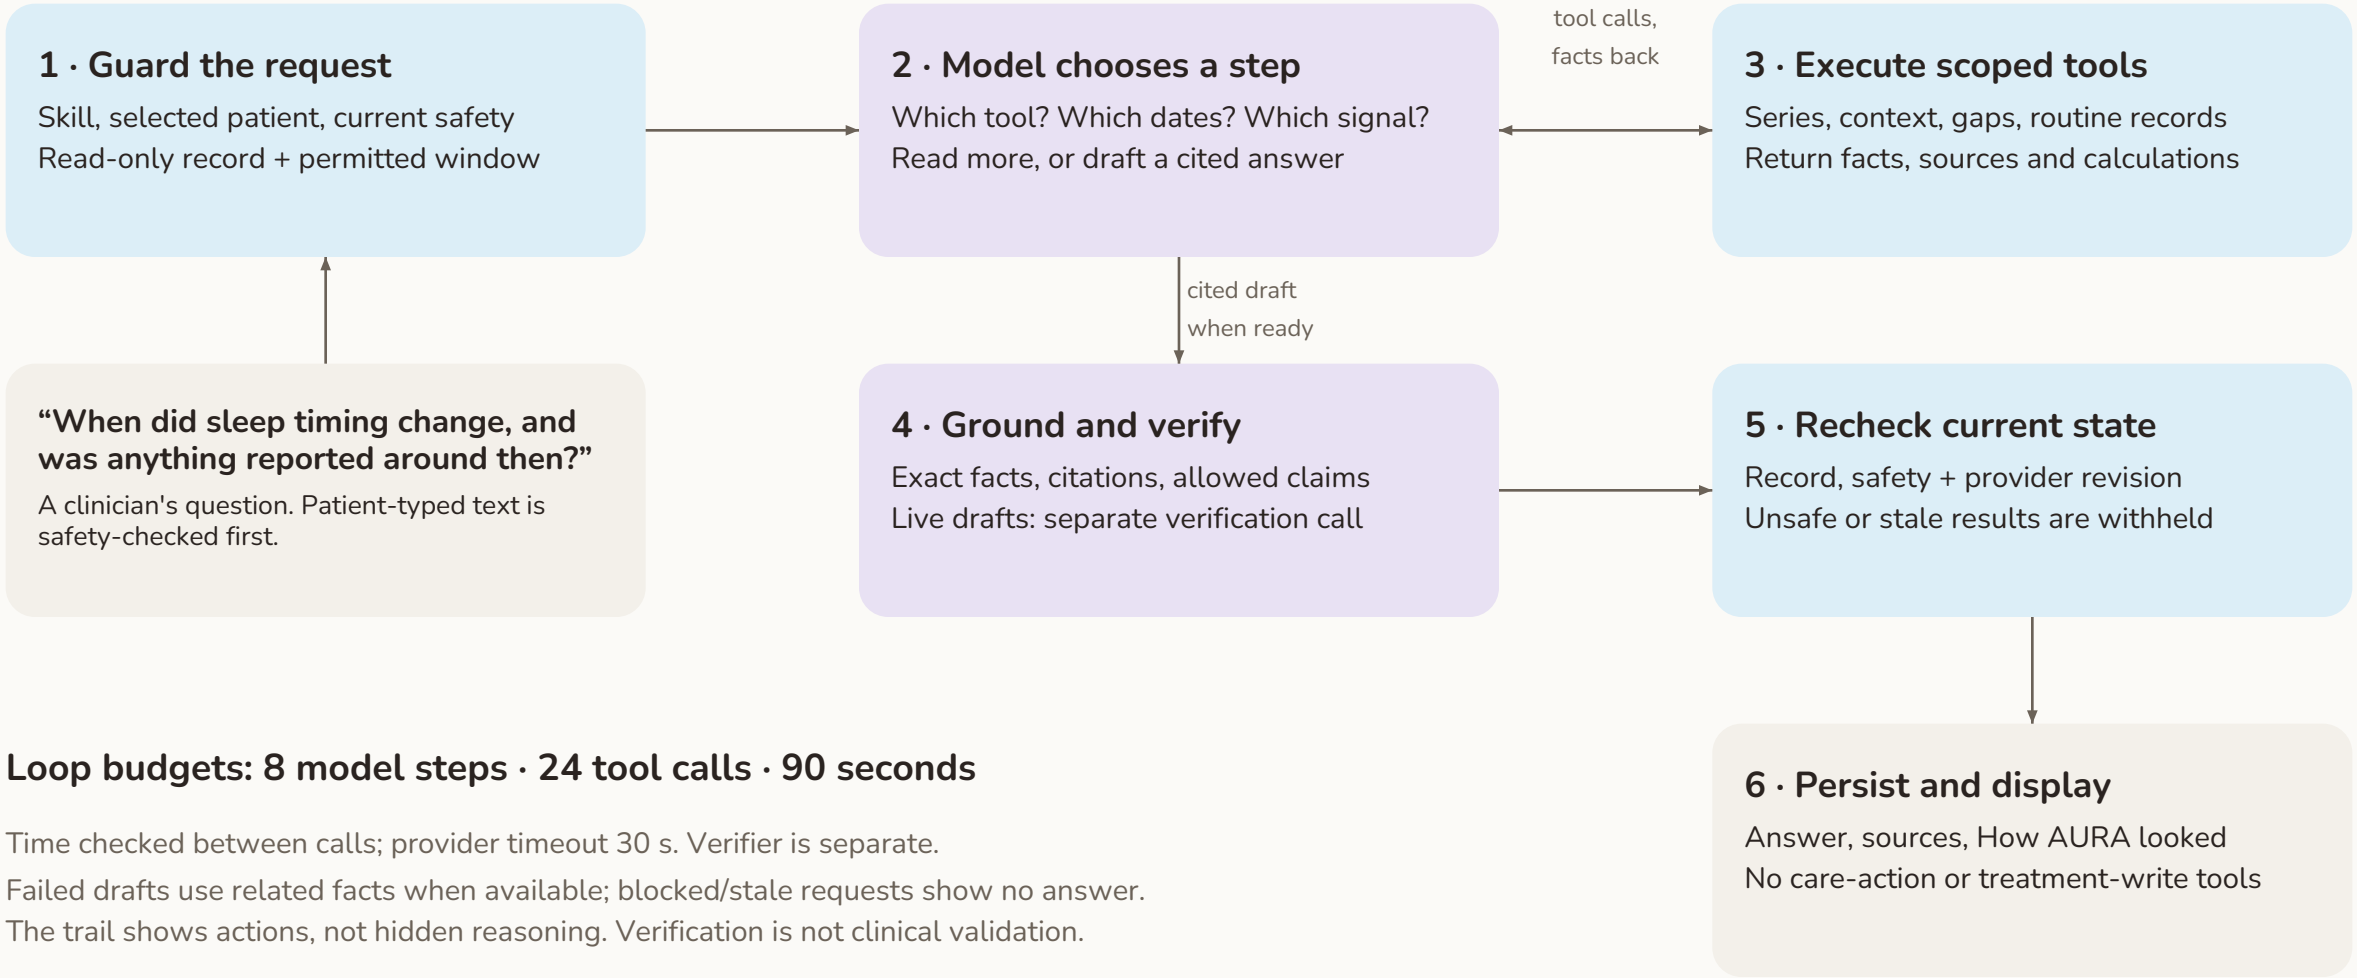

One application · synthetic workspaces · development storage

Demo roles, no clinical authentication. Visit preview: Not sent.

Institutional hosting is future work

Aura-Agent · investigate, cite, check

Challenge 2 · Scenario 1: mental health maintenance for working adults on antidepressants

Loop budgets: 8 model steps · 24 tool calls · 90 seconds

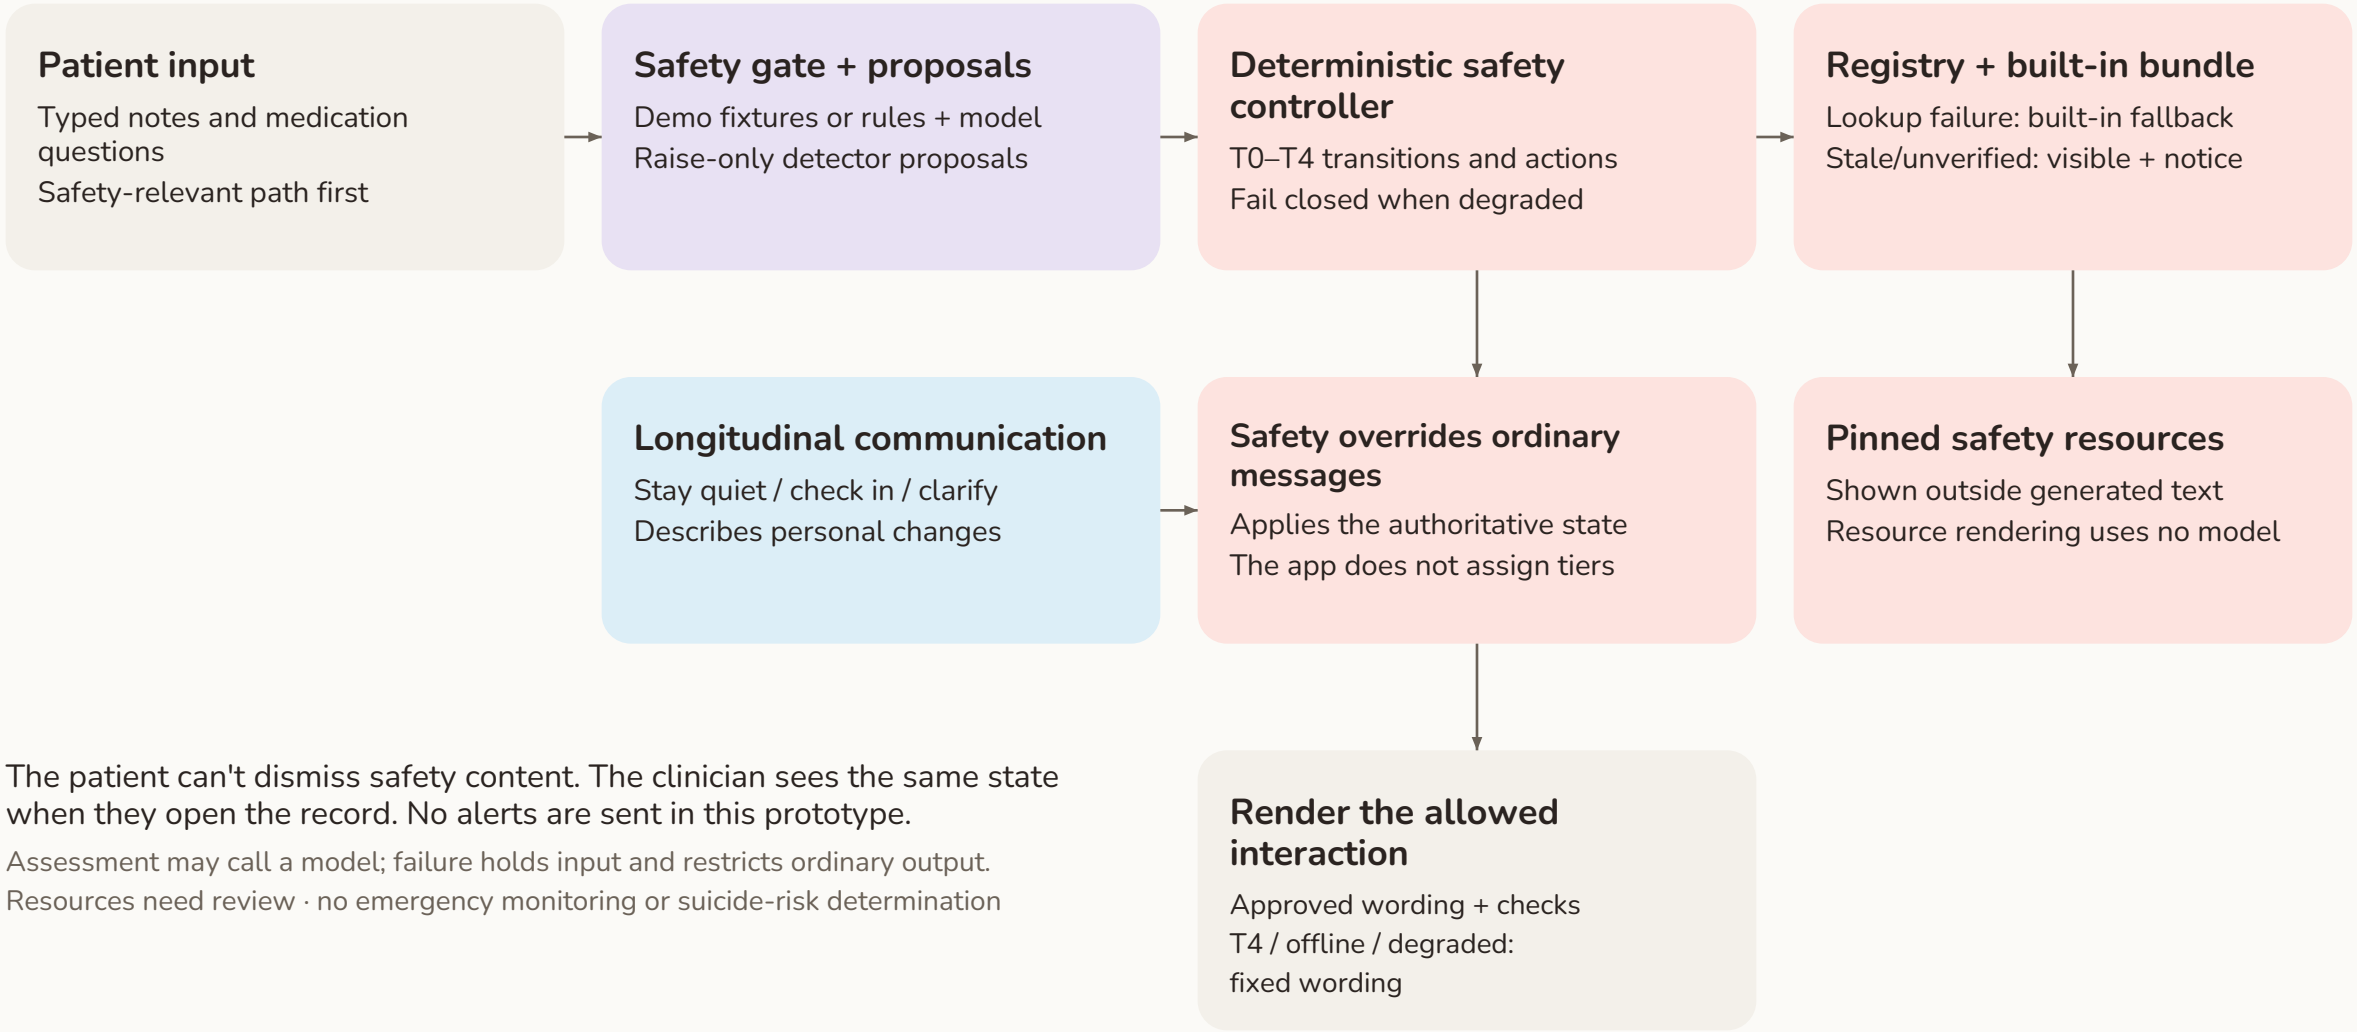

Time checked between calls; provider timeout 30 s. Verifier is separate.

Failed drafts use related facts when available; blocked/stale requests show no answer.

The trail shows actions, not hidden reasoning. Verification is not clinical validation.

Safety policy has the final say

Challenge 2 · Scenario 1: mental health maintenance for working adults on antidepressants

The patient can't dismiss safety content. The clinician sees the same state when they open the record. No alerts are sent in this prototype.

Assessment may call a model; failure holds input and restricts ordinary output.
Resources need review · no emergency monitoring or suicide-risk determination

AURA Health

A calm companion between doctor visits, so both sides start the conversation on the same page.
